

Embedded Systems 2 (Design, Architectures and Tools)

- Need to start with a bottom-up approach and first build links between EU and Korea researchers working in this area
 - As immediate step, leading Korean academic researchers can be invited in the next HiPEAC conference, the major European conference in the area, to present Korean research in this area and further discuss collaboration opportunities
 - Korean entities (academia or industry) can be involved in the HiPEAC Network of Excellence; first possible example: real-time monitoring of embedded systems
